

## Carbon-Based Superconductors: Towards high-TC Superconductivity (Hardback)

By -

Pan Stanford Publishing Pte Ltd, Singapore, 2014. Hardback. Book Condition: New. 226 x 154 mm. Language: English . Brand New Book. Superconductors (SCs) are attractive materials in all respects for any community. They provide a deep insight into the physical properties of the condensed matters and also have useful applications as ultra-low-power-dissipation systems that can help resolve the present energy problems. In particular, the recent advancement of carbon-based new superconductors (CNSCs) is significant. Before 2004, the superconducting transition temperature ( $T_c$ ) of carbon-based SCs was below 1 K, except in fullerene clusters. However, in 2004, a Russian group discovered that diamond highly doped with boron could be an SC at  $T_c = 4$  K. The following year, a group from Cambridge found that calcium-intercalated graphite could be an SC with  $T_c = 11.5$  K. In 2006 and 2008, the editor's group from Japan also discovered that carbon nanotubes could be SCs at  $T_c = 12$  K. Since then, research on CNSCs has increased notably. A small mass of carbon can produce high phonon frequency and high Debye temperature. Combining these with other specified properties of CNSCs (such as one-dimensional electronic states) is highly expected to open doors to high- $T_c$  superconductivity...

### Reviews

*It becomes an amazing pdf which i actually have at any time read through. This can be for all those who statte there had not been a worthy of reading through. You wont sense monotony at anytime of your own time (that's what catalogues are for relating to should you check with me).*
